

Dryer Changes:

We have made several improvements on our single pocket and stacked dryers. A brief summary is as follows:

- **Lower Exhaust Kit:** Available for single-pocket T-80 dryers, enables exhausting from the bottom
- **Duct Clean Out Kit:** Available for all single-pocket and stacked dryers, makes it simple and easy to clean-out the exhaust ducting without disassembly
- **Lint Tray Assemblies:** Improved design for more rigidity and easy to replace rear lint felt. The assembly number did not change but the new frame and felt part numbers are listed below.
- **Gas Valve:** Gas valves have changed on all stacked dryers and SWDS to standardize with single-pocket dryers. The new valves are White Rogers valves.
- **Burner Housing Assembly:** Improved construction makes it easier to service and perform regular maintenance on the burner tubes.
- **Door Switch:** New switch for door and lower service panel for single-pocket dryers. This switch is rectangular versus the previous round switch and is not currently backwards compatible.
- **SWD Make-Up Air Kit:** Available on T-350, T-450, T-750 SWDs. Isolates the make-up air for cold weather installations to keep water lines from freezing.
- **T-50 OPL Baffle Change:** Taller baffles on T-50 non-reversing OPL models to reduce roping.
